**9. Execute and Display the Results for the Following Nmap Timing and Performance Commands in Kali Linux Operating Systems**

**Note:** Use these commands only on a system/network that you own or have permission to scan. Here, 192.168.1.10 is an example authorized target IP.

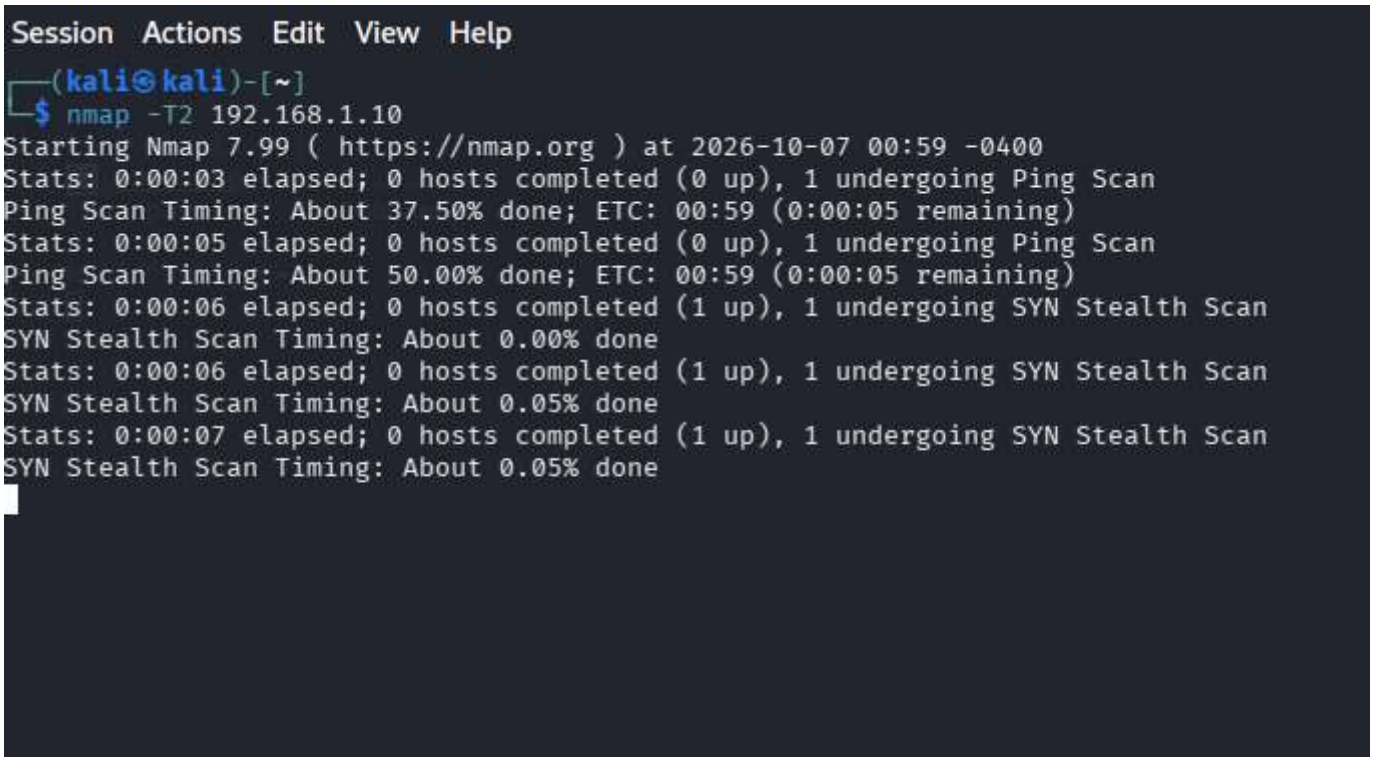

**i) Polite IDS Evasion**

**Use of Command:**
The -T2 timing option is called **Polite**. It slows down the scan to use less bandwidth and reduce the chance of disturbing the target system.

**Aim:** To perform a slower and polite Nmap scan.

**Command:**

nmap -T2 192.168.1.10

**Output:**

Starting Nmap 7.95

Nmap scan report for 192.168.1.10

Host is up.

PORT STATE SERVICE

22/tcp open ssh

80/tcp open http

443/tcp open https

Nmap done: 1 IP address (1 host up) scanned

**Result:** The -T2 option successfully performed a polite, slower scan of the target.

---

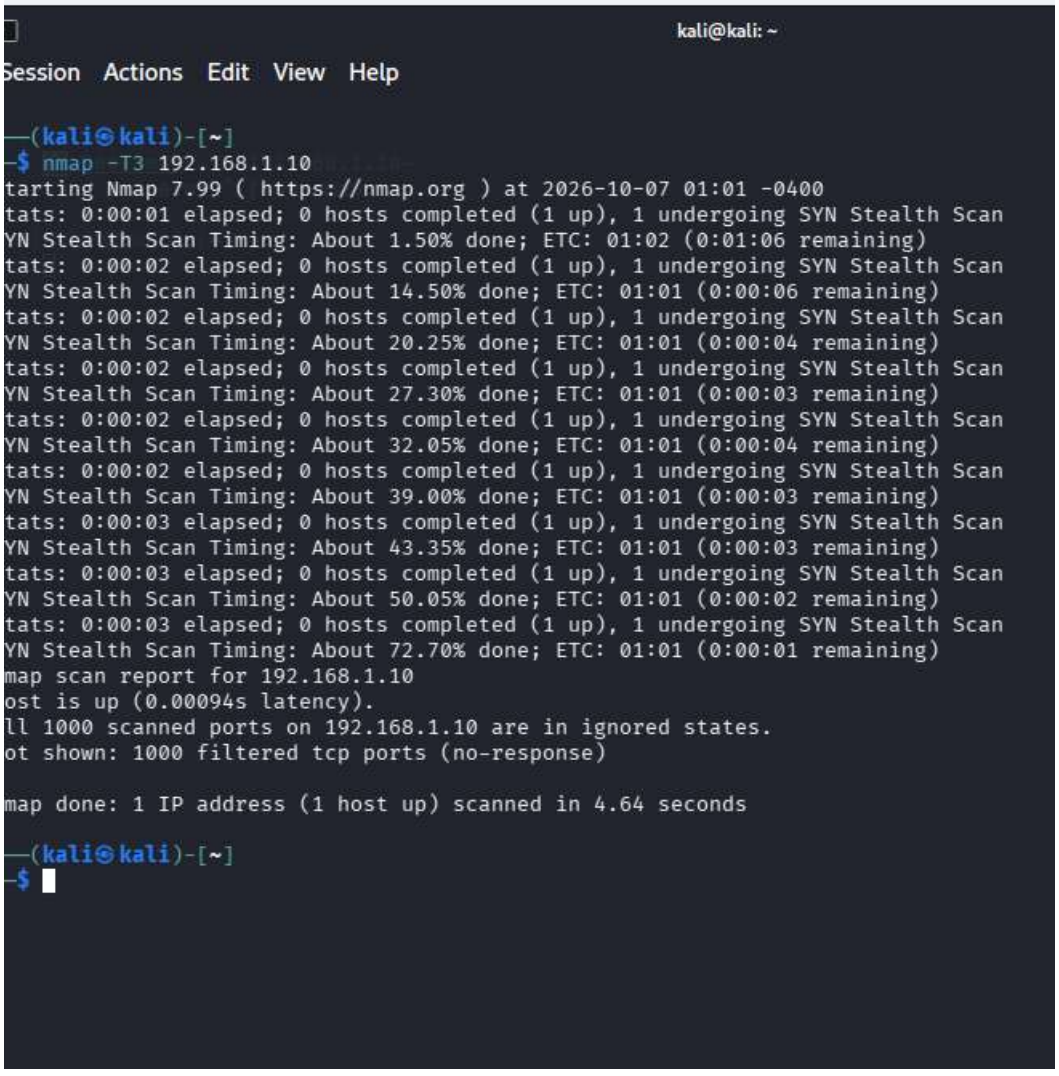

**ii) Normal IDS Evasion**

**Use of Command:**
The -T3 timing option is the **Normal** timing template. It is the default timing level used by Nmap and provides a balance between scanning speed and reliability.

**Aim:** To perform a normal Nmap scan using the default timing.

**Command:**

nmap -T3 192.168.1.10

**Output:**

Starting Nmap 7.95

Nmap scan report for 192.168.1.10

Host is up.

PORT STATE SERVICE

22/tcp open ssh

80/tcp open http

443/tcp open https

Nmap done: 1 IP address (1 host up) scanned

**Result:** The -T3 option successfully performed a normal Nmap scan.
